

Task 1

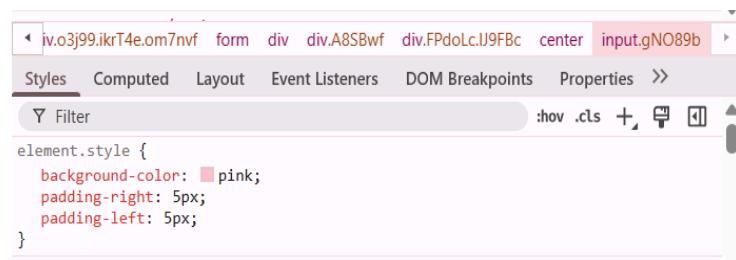

to remove the ‘I’m Feeling Lucky’ button, I first opened DevTools and selected the button using the element inspector. Once the button was highlighted in the Elements panel, I clicked on the three-dot menu of that element and chose ‘Delete element,’ which immediately removed it from the page.

Task 2

I added the following to the search button element:

```
background-color: pink;  
padding-left: 5px;  
padding-right: 5px;
```

```
element.style {  
    background-color: pink;  
    padding-right: 5px;  
    padding-left: 5px;  
}
```

Task 3

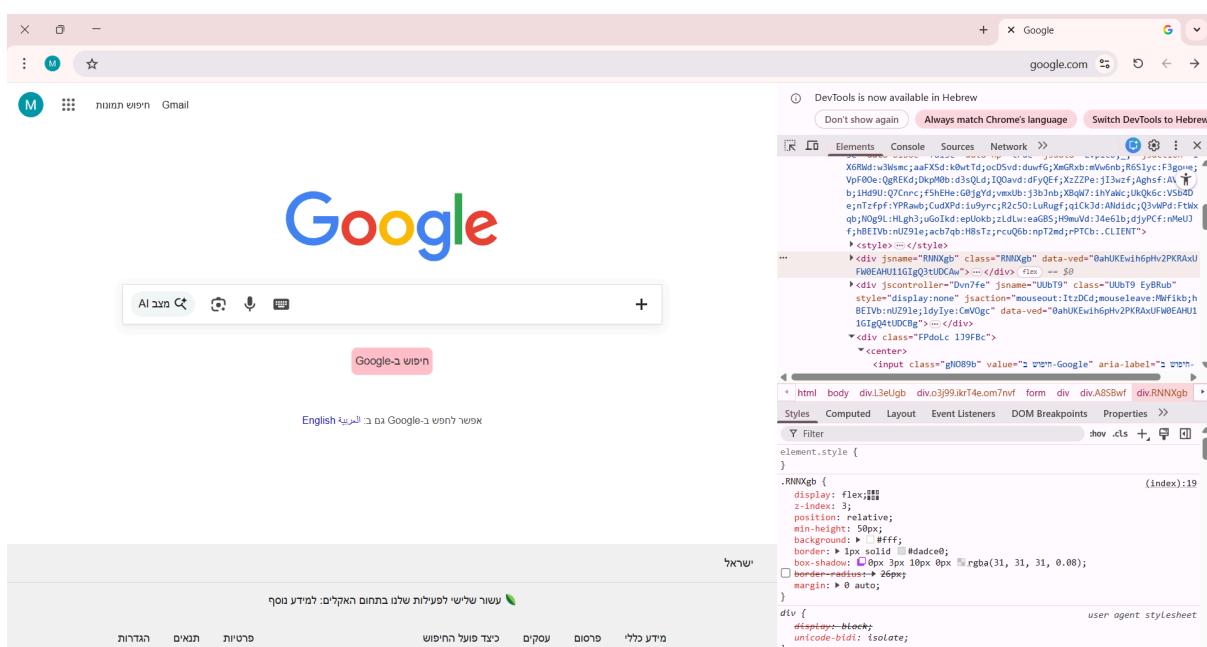

I removed the following from the input element:

```
border-radius: 26px;
```

because the border-radius CSS property controls how rounded the corners are.

If we remove the border-radius completely, the corners of the input will be fully square.

result:

```
element.style {  
}  
.RNNXgb {  
    display: flex;  
    z-index: 3;  
    position: relative;  
    min-height: 50px;  
    background: #fff;  
    border: 1px solid #dadce0;  
    box-sizing: border-box;  
    border-radius: 0;  
    border: 3px 10px 8px rgba(31, 31, 31, 0.08);  
    margin: 0 auto;  
}  
div {  
    display: block;  
    unicode-bidi: isolate;  
}
```
